PRANERA

ACTIVE POLO T-SHIRT

ANTI-MICROBIAL

Antimicrobial fabrics are fiber-based substrates to which antimicrobial agents have been applied at the surface, or incorporated into the fibers, rendering a product that kills or inhibits the growth of microorganism. The benefit of antimicrobial textiles is that they provide lasting, continual protection against potentially harmful microbes such as bacteria - wash after wash. They are also effective against stain and odour-causing bacteria, ensuring they stay cleaner and fresher for longer.

SUPER WICK

MOISTURE MANAGEMENT

Super Wick functionality in the fabric, gives it the ability to pull the moisture away from skin using tiny, built-in capillaries. Moisture is drawn to the exterior of the fabric, which makes it to evaporate faster. Super Wick keeps you cool and dry.

UV PROTECTION

The inherent nature of the fibre gives this fabric the UV Protection Properties. UV Rays in the sun are harmful to humans. Our fabrics are UPF 30+ and above thus giving you a day long protection.
